Dual Smile Makeovers

DR. RAVI DOCTOR DDS

Al and Jo Ann Miller had to smile often. As school administrators for the Arlington Independent School District, the Millers frequently smiled as they greeted children in the hallways and classrooms on campus. Yet, both were dissatisfied with their teeth and wanted to improve their smiles.

Jo Ann was displeased with the appearance of a crown on her front tooth, placed by a former dentist. And Al, who recently retired, wanted a brighter, whiter smile.

The Millers heard of Dr. Ravi Doctor's reputation as being one of the finest cosmetic dentists in the Metroplex.

Dr. Doctor has spent 18 years serving the greater DFW area. He and his highly trained staff, use the latest developments in dental technology to create a relaxing environment with patient comfort being a principle focus.

Al was impressed with Dr. Doctor's use of the latest technological innovations in dentistry, from lasers to digital x-rays and Jo Ann continued to read rave reviews of Dr. Doctor's knowledgeable staff and gentle dentistry methods.

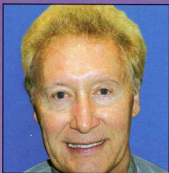

The couple decided to put their trust in Dr. Doctor and were very delightfully satisfied with the outcome.

Prior to correcting Jo Ann's discolored crown, Dr. Doctor used Zoom Whitening™ to brighten Jo Ann's lower teeth. Next, Dr. Doctor applied all porcelain crowns to Jo Ann's eight upper front teeth. Throughout the entire procedure Dr. Doctor viewed Jo Ann's mouth through a high-powered surgical microscope. The microscope allowed Dr. Doctor to place each crown in perfect position to create a more natural, flawless smile.

"The staff was very helpful guiding me through the process to pick the exact tooth color I desired," said Jo Ann. "The color I chose is clean and bright and the porcelain crowns look completely natural."

Prior to correcting Jo Ann's discolored crown, Dr. Doctor used Zoom Whitening™ to brighten Jo Ann's lower teeth. Next, Dr. Doctor applied all porcelain crowns to Jo Ann's eight upper front teeth.

Dr. Doctor replaced Al's old veneers with all porcelain crowns. Next, Dr. Doctor used a laser to contour Al's gum line to prepare his upper and lower front teeth for the application of the crowns.

even in the brightest light."

Al had porcelain veneers applied by a previous dentist. Due to some decay and leakage beneath Al's old veneers, Dr. Doctor decided to replace the veneers with all porcelain crowns. Next, Dr. Doctor used a laser to contour Al's gum line to prepare Al's upper and lower front teeth for the application of the crowns. The laser procedure is an invaluable step because the laser reveals more of the natural tooth structure along the patient's gum line, effectively creating a more appealing and pleasing smile.

"During my procedure, Dr. Doctor kept me fully informed, answering all of my questions. I felt relaxed and safe in the care of Dr. Doctor and his excellent dental staff," said Al. "As for any pain, there was none. I was given a prescription for pain medication but I never needed to use it."

Following their procedures, Jo Ann returned to work the next day and Al made a visit to his local gym. The Miller's were pleased with the short recovery time.

"Our schedules are so busy, minimal downtime was a necessity for us," said Jo Ann.

"Today I am more confident in my appearance. I smile much wider and more often than I used to," said Jo Ann. "Yesterday, Al and I visited a branch of our local bank and the teller paused at her window, leaning forward to tell us we both had beautiful smiles."

"My personal trainer at the local gym

repeatedly comments on my pearly, white teeth," said Al. "And of course I tell him who he should go and see, Dr. Doctor that is. I am very pleased with how low-maintenance my dental work is. I do not have to avoid tea or coffee as it will not stain my teeth and I only go in once a year for a dental checkup."

"We both leave for a Hawaiian vacation next week and can't wait to show off our new smiles," said Al.

Dr. Doctor earned his undergraduate degree from Texas A&M University and completed a Doctorate of Dental Science at the University of Texas Health Science Center at San Antonio. A member of the American Dental Association and the American Academy of Cosmetic Dentistry, Dr. Doctor completes more than 200 hours of continuing education programs each year to stay current on the latest trends and technology in the dental field.

Dr. Doctor specializes in a wide range of dentistry including, cosmetic, preventative, restorative and implant dentistry.

Dr. Doctor practices sedation dentistry. A great choice for those afraid of shots or who generally dislike the noises, tastes and smells associated with dental treatment. Sedation dentistry allows the patient to relax and enjoy the benefits of the dental experience without fear or anxiety.

Amenities found in all of Dr. Doctor's patient rooms include, flat-screen, high-definition monitors; 400 channels with Direct

TV; TiVO; individual DVD players; tinted glasses; and headphones. Add blankets and pillows and any visit to Dr. Doctor's office becomes a relaxing and entertaining experience. Dr. Doctor also offers convenient scheduling hours, with daytime and evening appointments available.
